

# Water-light complementary photovoltaic bracket

Does fishery complementary photovoltaic (FPV) power plant affect radiation and energy flux?

Meanwhile, the underlying surface of PV in land is significantly different from those in lake. The fishery complementary photovoltaic (FPV) power plant is a new type of using solar energy by PV power plant in China. The studies of the impact of FPV on the balance of both radiation and energy flux have been less presenting.

Are fishery complementary photovoltaic power plants a new surface type?

The deployment of photovoltaic arrays on the lake has formed a new underlying surface type. But the new underlying surface is different from the natural lake. The impact of fishery complementary photovoltaic (FPV) power plants on the radiation, energy flux, and driving force is unclear.

Is copper cable suitable for laying in a floating power station?

The conventional copper cable has a large turning radius, general flexibility and fatigue resistance and is not suitable for laying in a floating power station. The construction cost of the floating photovoltaic power station is relatively large compared with that of the ordinary ground photovoltaic power station.

Are Floating photovoltaic systems a viable alternative to ground-based power plants?

On the other hand, in densely populated and industrially developed areas with higher power demand, the land resources available for the development of ground-based photovoltaic power plants are relatively limited. Therefore, floating photovoltaic systems have gained more interest.

How to reduce the investment cost of a Floating photovoltaic power station?

The construction cost of the floating photovoltaic power station is relatively large compared with that of the ordinary ground photovoltaic power station. Therefore, the selection of cables should be considered to reduce the investment cost of power station construction on the premise of meeting the safety and stability of power station operation.

Why is temperature difference important in fishery complementary PV power plant?

The difference in temperature in various water layers benefits the cultivation of different fish in the fishery complementary PV power plant. Fig. 6.

On June 25, 2023, the Kola Phase I photovoltaic power station in Ganzi Prefecture, Sichuan Province, was connected to the grid to generate electricity, marking the world's first million-kilowatt "water-light complementary" power ...
