

Waterma energy storage container multiple

What is a containerized maritime energy storage solution?

ABB's containerized maritime energy storage solution is a complete, fireproof self-contained battery solution for a large-scale marine energy storage.

Why should you use multiple energy storage containers?

Multiple containers can be combined to create larger energy storage capacities, providing scalability based on the application energy requirements. This solution is ideal for retrofit installations, when dedicated battery room space is unavailable, and for semi-permanent installations.

What is containerized energy storage?

ABB's containerized energy storage solution is a complete, self-contained battery solution for a large-scale marine energy storage. The batteries and all control, interface, and auxiliary equipment are delivered in a single shipping container for simple installation on board any vessel. How does containerized energy storage work?

How does a maritime energy storage system work?

The maritime energy storage system stores energy when demand is low, and delivers it back when demand increases, enhancing the performance of the vessel's power plant. The flow of energy is controlled by ABB's dynamic Energy Storage Control System.

How many battery modules are in a 5 MWh container?

It will be outfitted with 48 battery modules based on the manufacturer's new 314 Ah LFP cells, each module providing 104.5 kWh capacity and designed to meet the needs of large utility scale systems. Due to the more compact design, the 5 MWh container will provide an energy density of 117 Wh/l.

What are the applications of water-based storage systems?

Aside from thermal applications of water-based storages, such systems can also take advantage of its mechanical energy in the form of pumped storage systems which are vastly used for bulk energy storage applications and can be used both as integrated with power grid or standalone and remote communities.
