

# What are all black photovoltaic panels

What are black solar panels?

Black solar panels, also known as monocrystalline panels, are a technological marvel in the solar energy revolution. Their sleek, uniform black appearance isn't just about style--it signifies a high-quality construction. Black solar panels are often referred to as "all-black panels" or "black-on-black panels."

Are black solar panels better than blue solar panels?

Black solar panels generally use monocrystalline silicon, while blue solar panels use polycrystalline silicon. Black (monocrystalline) solar panels tend to be more efficient than blue solar panels, but they also tend to be more expensive. A solar energy company can help you decide which type of solar panel is right for your home.

What is the difference between traditional and all-black solar panels?

There aren't many differences between "traditional" solar panels and their all-black counterparts. Traditional panels use white backsheets and silver frames, while all-black modules use -- you guessed it -- black backsheets and black frames.

How are black solar panels made?

Black solar panels in Australia are made with monocrystalline cells-- different to the standard polycrystalline cells in blue solar panels.

Should you choose a black or black solar panel?

Although residential solar customers want systems with the highest power ratings for maximum utility cost savings, aesthetics still reign supreme when it comes to solar panel choice. If even a sliver of an array will be seen by neighbors, homeowners will usually pick all-black modules for a sleek, finished system.

Are all-black solar panels a trend?

Customer demand reinforces the all-black trend. Many residential solar installation companies across the country now offer all-black modules as standard. Washington-based Northwest Electric and Solar works on both residential and commercial projects but keeps things simple for homeowners.
