

What are the photovoltaic panel dismantling equipment

How to dismantle photovoltaic waste?

At the end of the conveyor belt, a robotic system will be used to dismantle the PV waste. The aluminium frame and cables/junction box are separated from the layer of photovoltaic cells, glass and polymers.

How to remove a solar panel from a photovoltaic panel?

(1) The frame of the solar panel is removed by the frame removal machine. (2) Remove glass on the photovoltaic panel by a glass remover machine. This is the photovoltaic panel after removing the glass: (3) The solar photovoltaic panels with the aluminium frame and glass removed enter the twin shaft shredder.

How does sunygroup recycle solar panels?

SUNYGROUP's equipment recycles waste photovoltaic panels through physical means such as automatic dismantling, crushing, and sorting, so as to achieve the purpose of recycling useful components. (1) The frame of the solar panel is removed by the frame removal machine.

What is solar PV recycling?

Solar PV recycling (photovoltaic) is an up and coming waste stream generated in both consumer and commercial fields of use. While demand may not be terribly high at the moment, there are many early-era solar power systems or solar PV systems that will soon be reaching their end of life cycle.

Can solar panels be recycled?

Solar panels should be treated carefully as they may cause electric shock. Awareness of such risk, however, is still very low. We started to develop solar panel recycling technology in 2013, to solve this problem. Recycling glass, weight of which takes around 70 to 80 percent of a panel, is impossible if there are metals.

What materials are used in photovoltaic panels?

Photovoltaic panels contain high components such as glass, aluminum, adhesive sealant, silicon, and silver, as well as rare metals such as steel and gallium, which have very good resource utilization value.
