What are unqualified photovoltaic panels

What are the new requirements for labeling solar PV systems?
The requirements in 690.56 (C) for the labeling of buildings with PV systems and "Rapid Shutdown" have been modified to reflect the delayed implementation date of January 1,2019,that appeared in the 2017 NEC. The labels will now read as follows: "SOLAR PV SYSTEM IS EQUIPPED WITH RAPID SHUTDOWN.

Where should a PV system disconnecting means be installed?
(A) Location. The PV system disconnecting means shall be installed at a readily accessible location. Where disconnecting means of systems above 30 V are readily accessible to unqualified persons,any enclosure door or hinged cover that exposes live parts when open shall be locked or require a tool to open.

How many disconnects can a PV system have?
Each Photovoltaic (PV) systemis limited to six [690.13 (C)]disconnects. However,this applies to each PV system on a building. Therefore,possibly four or morePV systems could be installed on a building,and each could have up to six disconnects.

Where can I find a list of changes to a solar photovoltaic system?
These changes can be found in Article 690,Solar Photovoltaic (PV) Systems. Additional PV-related changes are located in Article 705. The first items are some relatively minor changes made to Figures 1 (a) and 1 (b) located in the informational note to Section 690.1.

Does a PV system meet the energized conductor requirements?
According to Informational Note (IN) in 690.13 (A),PV systems installed in compliance with the PV Rapid Shutdown System requirements of Section 690.12 address the concerns related to energized conductors inside the building.

Does appendix t require solar systems to be installed for a building?
Although Appendix T does notrequire solar systems to be installed for a building,it does require the space (s) for installing such systems,providing pathways for connections and requiring adequate structural capacity of roof systems to support solar systems.
