

What control method is used for photovoltaic inverter

What is a photovoltaic inverter control strategy?

The main objective of the inverter control strategy remains to inject the energy from the photovoltaic panels into the electrical grid. However, it is designed to inject this power through unbalanced currents so that the local unbalance introduced by the inverter contributes to the overall rebalancing of the grid's total currents.

What is inverter control methodology?

The inverter control methodology is based in two cascade loops: a fast internal current loop and a slow external voltage loop. The current loop controls the grid current and it effects the current protection and the power quality levels.

How ANN control a PV inverter?

Figure 12 shows the control of the PV inverters with ANN, in which the internal current control loop is realized by a neural network. The current reference is generated by an external power loop, and the ANN controller adjusts the actual feedback current to follow the reference current. Figure 12.

How do PV inverters control a low-voltage network?

Thus, a control method for PV inverters is presented, so that they inject unbalanced currents into the electrical grid with the aim of partially compensating any current imbalances in the low-voltage network where inverters are connected, but in a decentralized way.

How can photovoltaic inverters reduce current imbalance?

To mitigate the problems caused by current imbalance, solutions that measure and compensate for the current in the neutral conductor are proposed. However, through an adequate control method, the current balance of the distribution network could be achieved by the photovoltaic inverters themselves.

What is a control strategy for a three-phase PV inverter?

Control strategy A control strategy is proposed for a three-phase PV inverter capable of injecting partially unbalanced currents into the electrical grid. This strategy aims to mitigate preexisting current imbalances in this grid while forwarding the active power from photovoltaic panels.
