

# What is a generator wind shield

Can a storm shield cover run a generator?

Enjoy a neat, finished look while running your generator with confidence - the Storm Shield cover has the ability to withstand up to 70 mph winds, up to 12 inches of rain per hour and up to 18 inches of snow per day. The durable RF-welded seams and tough, NFPA-701 flame retardant rated vinyl fabric ensure the cover remains waterproof.

What is a champion storm shield generator cover?

Customers say the Champion Storm Shield Generator Cover is easy to assemble and provides excellent protection for generators during inclement weather. Many appreciate its sturdy construction and thoughtful design, which allows for easy access to controls and refueling.

What is the best weather cover for a 4000 watt generator?

Protect your 4000-12,500 starting watt portable open frame generator with Champion's Storm Shield Severe Weather Cover by GenTent®. The natural airflow design allows safe operation and maintenance while the cover is on and withstands up to 70 mph winds, up to 12 inches of rain per hour and up to 18 inches of snow per day.

What is a storm shield cover?

The high-strength clamps and fiberglass frame rods connect directly to the generator, while the detachable wrap-around electrical panel skirt keeps your outlets covered and dry while in use. The Storm Shield cover has the ability to withstand winds up to 70 mph, snow loads up to 18 in. and rain up to 12 in. per day.

How does a wind generator work?

Keeps dirt and moisture out. Rotating Shaft - Connects to the engine motor or propellers in wind/water generators and spins the armature inside the stator. Stator - A stationary magnetic field with large copper windings. Armature - Creates electromagnetic induction by spinning inside the stator of opposing magnetism.

Why do generators need a cover?

The cover keeps you protected by allowing you to stay running in the worst of weather conditions when running without a cover would be too dangerous. The self-attaching design of the cover allows the generator to maintain its natural cooling airflow and mobility.
