

# What is the company's annual photovoltaic panel production

How has global solar PV manufacturing capacity changed over the last decade?

Global solar PV manufacturing capacity has increasingly moved from Europe, Japan and the United States to China over the last decade. China has invested over USD 50 billion in new PV supply capacity - ten times more than Europe - and created more than 300 000 manufacturing jobs across the solar PV value chain since 2011.

How many GW will solar PV produce in 2024?

The current manufacturing capacity under construction indicates that the global supply of solar PV will reach 1 100 GW at the end of 2024, with potential output expected to be three times the current forecast for demand.

Who is driving growth in the solar photovoltaic industry?

Various actors, from key businesses to state governments, are driving growth in an industry that shows no signs of slowing down. Find up-to-date statistics and facts on the solar photovoltaic industry in the United States.

What was the global PV production capacity in 2023?

Accessed March 21, 2024 ; EIA "Annual Energy Outlook 2023." Accessed March 21, 2024. At the end of 2023, global PV manufacturing capacity was between 650 and 750 GW. 30%-40% of polysilicon, cell, and module manufacturing capacity came online in 2023. In 2023, global PV production was between 400 and 500 GW.

How much CO<sub>2</sub> does solar PV produce?

Despite these improvements, absolute carbon dioxide (CO<sub>2</sub>) emissions from solar PV manufacturing have almost quadrupled worldwide since 2011 as production in China has expanded. Nonetheless, solar PV manufacturing represented only 0.15% of energy-related global CO<sub>2</sub> emissions in 2021.

Which countries produce solar PV?

Australia Spain Canada Portugal United States Switzerland Europe Thailand Finland France Belgium Japan Italy Poland World Indonesia Greece Mexico China South Africa Netherlands Chile Korea 0 60 20 40 0 4 8 12  
Solar PV manufacturing capacity and production by country and region, 2021-2027 - Chart and data by the International Energy Agency.

Will new PV manufacturing policies in the United States, India and the European Union create global PV supply diversification? Notes Manufacturing capacity and production in 2027 is an expected value based on announced policies and ...

Global solar PV manufacturing capacity has increasingly moved from Europe, Japan and the United States to China over the last decade. China has invested over USD 50 billion in new PV supply capacity - ten times
