

# What should I do if the price of photovoltaic brackets drops

Will the price of solar panels keep dropping over the next decade?

The price of solar panels is probably going to keep dropping over the next decade. Solar has already become half as expensive as it was 10 years ago. New federal incentives that are giving certainty to the solar industry will likely push the price down even further.

Should you wait for solar prices to fall further?

The cost of going solar is dropping, in part thanks to the stability brought by an expanded federal tax credit. But should you keep waiting for prices to fall further? The price of solar panels is probably going to keep dropping over the next decade. Solar has already become half as expensive as it was 10 years ago.

Why will solar prices continue to drop?

A big reason why solar prices could continue to drop is significant development in the solar industry at large. The federal solar tax credit will be in place for at least the next 10 years. That means players in the solar industry -- from installers to manufacturers -- have received a green light to invest in their operations.

Why are solar panels so expensive?

The supply chain issues that have roiled the globe for years have inflated prices on most consumer goods, including solar panels. In the residential solar market, that caused a slight increase in prices. Considering Solar Panels? Solar in the US is also more expensive than in other countries, owing to higher permitting and overhead costs.

How much does solar cost?

The cost of solar has been falling for a long time. "Over the last decade, prices have come down by over 50% in the residential space," Rumery said. Considering Solar Panels? The average cost of a rooftop solar system now hovers around \$25,000.

How much does a solar PV system cost?

"A significant portion of the cost declines over the past decade can be attributed to an 85% cost decline in module price. A decade ago, the module alone cost around \$2.50 per watt, and now an entire utility-scale PV system costs around \$1 per watt," said NREL Senior Financial Analyst David Feldman.
