

# What solar photovoltaic panels need to be equipped with

What equipment do I need to go solar?

We'll break down everything you need to know about solar equipment to prepare you. You need solar panels, inverters, racking equipment, and performance monitoring equipment to go solar. You also might want an energy storage system (aka solar battery), especially if you live in an area that doesn't have net metering.

How many solar panels do I Need?

Energy usage dictates how many solar panels you'll need, and it can even determine if it's worth it to go solar at all. The more energy you use, the bigger the solar system you'll need to cover your consumption. Most home solar systems use between 15 and 19 solar panels, but the exact number needed is unique for each home.

Do you need a solar battery?

Solar batteries can be added to your solar system to store solar energy for later or if you want to use it overnight. Storage batteries also allow a PV system to operate when the electric grid is not available. If you want your solar panels to operate during a power outage, you need to pair them with a solar battery.

Should I add a solar energy system to my roof?

You may be considering the option of adding a solar energy system to your home's roof or finding another way to harness the sun's energy. While there's no one-size-fits-all solar solution, here are some resources that can help you figure out what's best for you. Consider these questions before you go solar. See the Spanish version [here](#).

How does a solar panel system work with my home?

Exactly how the solar panel system works with your home and the electric grid will depend on the type of solar panel system you have. There are three main types of home solar systems: grid-tied, hybrid (or solar-plus-storage), and off-grid. The following videos outline how different solar system types work:

How do I choose the best way to use solar electricity?

Before deciding on the best way to use solar electricity at home, assess the potential solar energy that can be produced at your address. Because PV technologies use both direct and scattered sunlight to create electricity, the solar resource across the United States is ample for home solar electric systems.

Solar tiles are designed to look like traditional roofing tiles but are equipped with photovoltaic cells to ... of the solar panels, and have a suitable pitch for optimal solar exposure. Flat roofs are typically less suitable for solar ...

The first is the one you're likely most familiar with - photovoltaics, or PV. These are the panels you've seen on rooftops or in fields. When the sun shines onto a solar panel, photons from the sunlight are absorbed by the
