

# What to do if a power outage damages the photovoltaic panels

Do solar panels work during a power outage?

Solar panels alone won't work during a power outage--but when paired with solar battery storage, they can. See how solar battery storage keeps your solar systems working during an outage with reliable, renewable solar power, and why we need clean energy now more than ever. [Why Do I Need a Solar Battery During a Power Outage?](#)

How can solar power be harnessed during a power outage?

This ensures that electricity doesn't flow back into the grid, which could be dangerous for those repairing it. **Battery Storage Systems:** To harness solar power during an outage, one needs a battery storage system. These batteries store excess energy produced by the solar panels.

Do rooftop solar panels work during a grid outage?

Contrary to popular belief, installing rooftop solar panels doesn't guarantee that you'll have power during a grid outage. A grid-tied solar system must be turned off when the power goes out to protect utility workers.

What happens to solar power during a blackout?

In a blackout situation, the power from your solar panels goes nowhere- unless you have some way of storing the electricity (with a battery) or otherwise cutting your system off from the grid. In this video Will White explains what it takes to ensure you have power with solar during an outage: [How can you use solar power to survive a power outage?](#)

How can hybrid solar systems help with power outages?

To address the issue of power outages, some homeowners opt for hybrid solar systems. These systems combine solar panels with energy storage solutions, such as batteries. The energy generated by the solar panels can be stored in batteries and used to power the home during periods of grid outages.

Do solar panels need to be turned off when power goes out?

A grid-tied solar system must be turned off when the power goes out to protect utility workers. However, if you combine your solar system with battery storage, your battery stores excess electricity that your solar panels generate. You can tap into stored solar power during a power failure.

**Natural Disasters:** Catastrophic damage caused by natural disasters such as hurricanes, earthquakes, wildfires, and mudslides can result in widespread and long-lasting power outages. Wildfires have regrettably become a recurrent ...
