

# What to do if grass grows under photovoltaic panels

How do you manage vegetation under a solar array?

To date, the most common plans for vegetation management under solar arrays are mechanical control (mowing), grazing sheep, and pollinator habitat, or a combination of these three. In almost every scenario a mixture of different plant species will provide more desirable outcomes than a monoculture.

Is mowing the lawn a good idea for a solar system?

The sun is shining and the grass in your backyard is growing quickly. At home, mowing the lawn is one of summertime's most frequent chores -- and it's no different for the solar industry. Credit: Nihon Shokusei Weed or vegetation management is particularly important for ground-mounted solar systems.

Can solar panels help grow crops under a trampoline?

And while the grass under your trampoline grows by itself, researchers in the field of -- made up of solar cells that convert sunlight directly into electricity -- have been working on shading large crop lands with solar panels -- on purpose. This practice of growing crops in the protected shadows of solar panels is called .

Can you plant plants under solar panels?

You can plant a range of plants on your land underneath the solar panels, and it would significantly impact your vegetation, depending on the height of the ground mounts you place. Solar panels don't dry up or heat anything beneath or around the array, which is good news for crops.

Can solar panels shade large crop lands?

And while the grass under your trampoline grows by itself, researchers like me in the field of solar photovoltaic technology -- made up of solar cells that convert sunlight directly into electricity -- have been working on shading large crop lands with solar panels -- on purpose.

Could agrivoltaic farming be a solution?

Agrivoltaic farming could be a solution to not just one but both of these problems. It uses the shaded space underneath solar panels to grow crops. This increases land-use efficiency, as it lets solar farms and agriculture share ground, rather than making them compete against one another.
