

What to do if the back of the photovoltaic panel turns black

Why do solar panels have black backsheets?

Full black solar modules with black backsheets are especially important in residential applications that value aesthetics over performance. It is especially important to keep the solar cell colours uniform on full black panels to prevent blotchy colours on black roofs. Uneven solar cell colours can result in disappointing full black installations.

How to prevent discoloration in solar panels?

Unfortunately, there are few measures that you can take to prevent discoloration in solar panels, as it's often the result of low quality EVA, meaning the best way to stop it from happening is to ensure you buy from a reputable manufacturer using top quality materials for the back sheet.

What happens if a solar panel is discolored?

This discoloration can impact the panel's performance, leading to decreased efficiency and reduced power output. Solutions to solar panel discoloration include regular professional cleaning, proper installation, monitoring system performance, and contacting the installer for assessment and guidance.

How do I know if my solar panels are defective?

This issue can be detected using an infrared (IR) camera, which shows a noticeable temperature difference between the solar cell strings. To avoid this problem, using more advanced manufacturing techniques and conducting careful EL inspections before shipping can prevent such defects in solar panels. 22. Defective Junction Box

How to prevent solar panel heat problems?

Keeping the panels free from dust and dirt also helps in preventing solar panel heat problems. Most solar panels are fixed by using a photovoltaic mounting system. Unless this process of panel racking is done properly, the panels will not remain fixed in place. In time, even strong winds can move them out of position.

Why do I have dark spots on my solar panels?

Without a secure seal, moisture and air can enter the system, causing corrosion and substantially reducing panel performance. If you see dark spots on your panels, this could be a sign that your panels are undergoing delamination, and you should contact your installer for an inspection.
