

What to do if the photovoltaic panel is flooded and leaking electricity

What should I do if my solar panel is damaged?

If you suspect a panel is damaged, your first step should be to disconnect it from the system and turn off the electricity supply to that part of your solar setup. Then, carefully assess the damage. If you see exposed wires, shattered glass, or other significant issues, do not attempt to repair it yourself.

How do I protect my solar panels from water damage?

To best avoid water damage, take the time to reseal each panel or have a licensed solar panel contractor do this for you. Upon inspection, an expert will also be able to gauge if anything else can be done to maintain your solar panels.

Can solar panels survive a flood?

The latter can be achieved by constructing solar arrays outside of expected flood areas or incorporating a structural design with adequate freeboard and structural strength to survive extreme flood events.

Are solar panels leaking water?

Water damage from deteriorated or old seals is another common pain point for solar panel owners. This is similar to insulation or sealing issues with window panes. As the sealant ages, it becomes less effective and allows water to leak through. When this happens, it can lead to short-circuiting and may degrade the components of your solar panels.

Can a broken solar panel be repaired?

It's not advisable to repair a broken solar panel on your own, especially if it involves exposed wires or significant damage. Handling electricity and broken glass requires expertise. Contact a professional solar technician for repairs. Q. Do insurance policies cover damage to solar panels?

How can a solar project mitigate flood risk?

Structural design consideration for tracker stow, equipment freeboard, and pile scour protection are important to mitigate flood risk at solar projects. If flooding is expected within the solar array footprint at a project, trackers can be programmed or manually operated to rotate into a "flood stow" position.
