

What to do if you don't drill holes when installing photovoltaic panels

Can you install solar panels on a roof without drilling?

Install Solar Panels On A Roof Without Drilling (Do This!) One of the main drawbacks of the traditional way most solar panels are installed on residential properties is that it requires drilling through the roof, which presents a few problems. The biggest problem with drilling into the roof is that you are increasing the chance of the roof leaking.

Do solar panels need holes?

One of the biggest concerns for property owners is the holes needed in their roofs to secure their solar panels. During installation, workers will drill holes in your roof to secure the racking which will hold your panels. These holes are for lag bolts, which secure your panels to your roof, and are designed to withstand extreme weather.

How do I avoid solar on my roof?

Another option to avoid solar on your roof entirely is to install a ground mount or join a community solar plan and receive solar energy from an offsite location. A rooftop solar panel installation is a great investment that won't lead to roof damage when you work with a professional, experienced installer.

Can you install solar panels on a flat roof?

Ballast systems are simply a weighted racking setup that holds solar panels in place. If you need to drill into your flat roof to install solar panels, don't worry- your solar installer will ensure that the holes they drill are as small as possible and sealed correctly to avoid roof damage or leaking. Can you install solar panels on wooden roofs?

How do you install solar panels on a shingle roof?

Asphalt is perhaps the most popular roof material - as such, asphalt shingle solar panel installations are common and straightforward. Installers will drill studs into your roof and attach panel mounts at those locations.

Can solar panels be installed on a damaged roof?

Solar panels are not installed on old or damaged roofs -- or, at least, they shouldn't be! The typical life span of a roof is around 25 years, which is also the life span of an average solar panel. Therefore, if your roof is over a decade old, it's probably going to start breaking down 10 years before your solar panels are ready for replacement.
