

What water pump should be used for solar power generation

What is a solar water pump system?

A solar water pump system is commonly seen in residential and commercial uses, as well as for irrigation of agricultural land. Through solar panels, the pump can eliminate the cost of energy and provide a more feasible option that uses energy from the sun (and not fuel-burning mechanisms) for pumping water.

How to choose a solar water pumping system?

The type of solar water pumping system: borehole/well (submerged), floating or surface will depend on the water source. If the source is a borehole (proposed or existing) or deep well, then a submersible pump that fits the borehole or well should be selected. If the water source is a river, then a surface pump should usually be selected.

Can a solar water pump be used for pumping water?

According to each individual need, solar water pumps can be applied for the following purposes where pumping water is needed: Solar Powered Water Pump systems are fairly basic installations: [caption id="attachment_4914" align="center" width="517"]Solar Powered Water Pumping [/caption]

Are solar water pumps only for the rich?

Are solar panels only for the rich. As panels become cheaper and increasingly portable, solar water pumps are just as versatile as water pumps powered by fossil fuels and in some cases more so. They are ideal for delivering water to remote locations where power lines cannot reach, do not require expensive and polluting fuel, and

Can a solar water pump be used on a farm?

Solar water pumps are suitable for many different types and sizes of farms. From small garden plots and allotments to larger, industrial farms, you should be able to find a solar water pump that can match your needs.

What are the different types of solar water pumps?

There are two main categories of solar water pumps, surface and submersible. Within these categories you will find several different pumping technologies each with different qualities. Surface water pumps A surface water pump is placed on the ground surface near the water source.
