What are the different sizes of solar panels?

There are three main sizes of solar panels to know: 60-cell, 72-cell, and 96-cell. For commercial and residential solar panels, the 60-cell and 72-cell solar panels size are most commonly used as the 96-cell measures 17.5 square feet - which can make for a challenging fit on your roof.

What size solar panels do I Need?

There isn't much to choose between the two standard sizes of solar panels. The main thing that will affect your decision to go for 60-inch or 72-inch panels is how they fit into the roof space you have available for your solar system. It might turn out that a combination of both sizes gives you the best use of your space.

How much space does a solar panel take up?

One residential solar panel is often around 1.7 m<sup>2</sup> in area. A common 6.6 kW system might take up 29 - 32 m<sup>2</sup> of roof space, depending upon the rated capacity of the panels. Panels can be installed in portrait or landscape orientation to make the best use of the available roof space.

What is the size of a rooftop solar system?

The size of a rooftop solar system refers to the total power-generating capacity of all the solar panels, measured in kilowatts (kW). The system size depends on the number of solar panels and the rated capacity of the panels. System size is measured in kilowatts (kW). One kilowatt (1 kW) = 1000 Watts.
