

# Why do photovoltaics use aluminum paste to make brackets

Does aluminum alloy need aging heat treatment for solar photovoltaic brackets?

The commonly used aluminum alloy series for solar photovoltaic brackets need to undergo aging heat treatment to achieve the required strength. China Aluminum strictly controls the solution treatment and aging heat treatment process to ensure the required strength of the aluminum alloy brackets.

Is aluminum a good material for solar panels?

With its advantages of light weight, high strength, corrosion resistance and durability, aluminum is widely used in building solar panel frames and photovoltaic supports. Research shows that aluminum is the most widely used material in solar photovoltaic (PV) applications, accounting for more than 85% of most solar PV modules.

What is photovoltaic metallization paste?

Explaining just about the front side paste, Rajaram Pai said-photovoltaic metallization pastes are screen printed onto the surface of solar cells in a pattern of grid lines which serve to collect electricity produced by the cell and transport it out.

Why is aluminum used in solar panels?

Aluminum is also employed as reflector panels in solar panels, guiding sunlight to enhance energy absorption efficiency in certain solar heating systems. Hot selling: 1100, 3003 aluminum sheet used in solar cell connections to link solar cell chips together, ensuring efficient current transmission.

How many types of conductive pastes are used in solar applications?

Majorly three kinds of conductive pastes are used in solar applications; Andreas shared with us about the difference in silver (Ag) and aluminum (Al) paste. He said for metallization pastes, there are generally three types on current cell structure:

What are the advantages and disadvantages of aluminum solar panels?

And with its good conductivity, aluminum has gradually replaced the position of silver, copper and stainless steel in the solar panels. Compared with traditional materials, aluminum cooling speed is fast, which has a significant advantage in solar PV, because the increase of PV cell temperature will reduce the power generation efficiency.

With its advantages of light weight, high strength, corrosion resistance and durability, aluminum is widely used in building solar panel frames and photovoltaic supports. Research shows that aluminum is the most widely used material in ...
