

How can a wind-solar power generation contribute to green hydrogen production?

To broaden the utilization/consumption of renewable energy, the water electrolysis driven by the wind-solar power generation is developed to achieve the green hydrogen production, the system configuration is shown in Fig. 1. This system mainly consists of the wind turbine, photovoltaic system, AEL and battery.

Why is hydrogen storage important?

Promising solutions, such as hydrogen storage, can counteract the intermittency of solar and wind energy and optimize the use of stored energy when the wind doesn't blow and the sun doesn't shine. Certification and testing play a pivotal role to ensure hydrogen storage is carried out safely.

How to maintain a safe and stable operation of wind-solar hybrid hydrogen production system?

To maintain the safe and stable operation of wind-solar hybrid hydrogen production system, the operation constraints should be adopted. And the power balance constraint is adopted as Eq. 15 to satisfy the system energy conservation during dynamic operation.

What is a day-ahead scheduling strategy for wind-solar hybrid hydrogen production system?

A day-ahead scheduling strategy for wind-solar hybrid hydrogen production system is proposed, by utilizing energy storage to transition the electrolyzer's operating state, and thus shorten the start-stop cycles of the AEL and extend its operational lifespan.

How a wind-solar hybrid hydrogen production system works?

Installed scale optimization of wind and solar power generation In the wind-solar hybrid hydrogen production system, the unstable wind-solar power affects the fluctuation operation state of hydrogen production from electrolytic water.

What is solar energy and wind energy?

Solar energy and wind energy are renewable energy with huge storage capacity and no pollution. The combined supply system of solar, wind and hydrogen network integration with mutual electricity, heat and hydrogen can effectively solve the global environmental pollution and greenhouse gas emission problems.
