What is the history of wind power?

Today, modern wind turbines, along with solar photovoltaics, are the principal source of new electricity generating capacity. We briefly trace the development of modern wind turbines from the late 19th century to the present in Europe and North America. Much has been written about the history of wind power in both the academic and popular press.

When did wind turbines start generating electricity?

This work is divided into two parts: the first part takes up the development from the first electricity producing wind turbines through to the 1960s and a second part on development from the 1970s onward, see (Gipe and M&#246;llerstr&#246;m, in press).

When did wind turbines become popular?

In the late 1800s and early 1900s, small wind-electric generators (wind turbines) were also widely used. The number of wind pumps and wind turbines declined as rural electrification programs in the 1930s extended power lines to most farms and ranches across the country. However, some ranches still use wind pumps to supply water for livestock.

When were wind powered generators first used?

Wind powered generators were used on ships by the end of the 19th century, as seen on the New Zealand sailing ship "Chance" (1902). The first wind turbine used for the production of electricity was built in Scotland in July 1887 by Prof James Blyth of Anderson's College, Glasgow (the precursor of Strathclyde University).

What is a review of wind energy history?

7. Conclusions A review of the wind energy history undertaken in the current work emphasizes on the main issues of global market facts, technology, economics, environmental performance, prospects and R&D of wind power, providing some insight and presenting the highlights for each of the fields.

When did offshore wind power start?

Offshore wind power began to expand beyond fixed-bottom, shallow-water turbines beginning late in the first decade of the 2000s.

Overview Antiquity Early Middle Ages Late Middle Ages 18th century 19th century 20th century 21st century Wind power has been used as long as humans have put sails into the wind. Wind-powered machines used to grind grain and pump water -- the windmill and wind pump -- were developed in what is now Iran, Afghanistan, and Pakistan by the 9th century. Wind power was widely available and not confined to the banks of fast-flowing streams, or later, requiring sources of fuel. Wind-powered pumps drai...
