

Wind power generation is large

Global onshore and offshore wind generation potential at 90m turbine hub heights could provide 872,000 TWh of electricity annually. 9 Total global electricity use in 2022 was 26,573 TWh. 10 Continental U.S. wind potential of 43,000 TWh/yr 9 ...

Overview Wind power capacity and production Wind energy resources Wind farms Economics Small-scale wind power Impact on environment and landscape Politics In 2020, wind supplied almost 1600 TWh of electricity, which was over 5% of worldwide electrical generation and about 2% of energy consumption. With over 100 GW added during 2020, mostly in China, global installed wind power capacity reached more than 730 GW. But to help meet the Paris Agreement's goals to limit climate change, analysts say it should expand much faster - by over 1% ...

Wind turbines work on a simple principle: instead of using electricity to make wind--like a fan--wind turbines use wind to make electricity. Wind turns the propeller-like blades of a turbine around a rotor, which spins a generator, ...
