

Are silicon-based photovoltaic panels a Socioenvironmental threat to the biosphere?

Mass installation of silicon-based photovoltaic (PV) panels exhibited a socioenvironmental threat to the biosphere, i.e., the electronic waste (e-waste) from PV panels that is projected to reach 78 million tonnes by the year 2050.

Which countries are addressing the challenges posed by photovoltaic panels?

Several nations, including the United States, China, European Union member states, India, and Japan, have independently developed distinct local directives and policies to address the challenges associated with managing and recycling electronic waste generated by photovoltaic (PV) panels.

Do meteorological parameters affect photocurrent and thermal voltage of solar panels?

Sohani et al. [110] examined the effect of meteorological parameters on the photocurrent and thermal voltage of a 320 W polycrystalline solar panel, showing a 200% increase in solar radiation impact within the range of 500-1500 W m⁻².

Are floatovoltaic solar panels a good idea?

Floating solar arrays might mar the scenery and curb the recreational use of reservoirs, leading to falls in local property prices; floatovoltaic developers will thus probably face resistance from nearby landowners.

How is photovoltaic waste treated in India?

India recycling regulations: As of now, India lacks specific rules and regulations dedicated to the management of photovoltaic (PV) panel waste, and it is currently treated under general waste regulations (Preet et al., 2023).

Can rooftop solar power benefit Puducherry Electricity Department?

The results indicated that installing rooftop solar power for these consumers would establish a 5 MW capacity, support power generation for the Puducherry Electricity Department, reduce losses, fulfill a 5 MW renewable power obligation (RPO), and benefit from the net metering feature of smart meters.
